National Authority for Child Care · Regional Alternative Child Care Office 1

PSYCHOLOGICAL PROGRESS REPORT

CONFIDENTIAL (sample) · prepared for case management use only

Name of child:	Miles D. Morales	Case reference:	C-0014 · Adoption
Age:	9	Coverage:	Sessions 1-3, June-July 2026
Prepared by:	Levi D Makalaya, RPsy	Date:	21 July 2026

REASON FOR REFERRAL

Miles was referred by the social worker for a psychological evaluation as part of the adoption case management process, to establish a behavioral baseline and to support matching with his prospective adoptive family.

BEHAVIORAL OBSERVATIONS

Across the three sessions Miles presented as neatly groomed and adequately nourished. Rapport was established easily by the second session. He was initially reserved, speaking in short phrases, but became spontaneous when the conversation turned to drawing and basketball. No unusual motor behavior was observed. Attention was age-appropriate; he needed only occasional redirection during longer tasks.

FINDINGS

Clinical interview and play-based observation suggest a child adjusting adequately to his current placement. Miles expresses warmth toward his aunt and speaks of the planned adoption with cautious optimism. Mild worry themes center on school performance rather than placement. Sleep and appetite are reportedly regular. No indicators requiring urgent clinical attention were observed during the covered sessions.

RECOMMENDATIONS

- Continue monthly counseling sessions through the transition period.
- Coordinate with the school counselor regarding classroom support.
- Involve the prospective adoptive parent in the next family session.
- Re-assess after placement to update the behavioral baseline.
